

As in past years, our trainees drove in an awesome ski camp on the Belalp (Valais) at mid-January, where they passed one week with a training supervisor in the middle of the skiing region. Whether skiing or snowboarding, fun is always written in front of the daily schedule, especially if the weather appears at his best, as it was the case this year. It snowed on the arrival but no sooner the group was on the slope, the sun was shining with a few exceptions and the snow was good.

For dinner, we meet for a jovially get-together. For the further course of the evening, the trainees conceive different evening programs, for example to go sledding, to watch a movie and so on. This year, two apprentices who are in the 4th year of apprenticeship (Stefan and Sebastian) made a presentation about our company.

Traditionally, since about 25 years, this camp is being arranged every year. The aim is the advancement of the team formation among the trainees and their instructors. It is financed by the revenues from the collection and sale of swarf (metal shavings) which is a duty of the trainees.

The formation of the trainees is important for us, to add a considerable contribution to the economy, respectively to ensure our offspring. At the moment we employ 13 trainees: 8 poly mechanics, 4 technical designers and 1 merchant.

As medium-size enterprise we are proud, to accomplish an appreciable contribution on the apprentice training.
